

A. $w(z)$ from $V(\phi) = V_0 e^{\lambda \phi/M_{pl}}$ B. Phantom Potential: $V = V_0 e^{\lambda \phi/M_{pl}}$ C. Derivation Chain: $\lambda \rightarrow w_0 \rightarrow \Gamma/H$ 

D. Parameter Hierarchy

THEORETICAL DERIVATION SUMMARY

Input (from inflation):
 $\lambda = 0.77$ (potential slope)

Derived parameters:
 $w_0 = -1 - \lambda^2/5 = -1.2$
 $\Gamma/H_0 = 3(w_0 + 1) = -0.6$
 $m_\phi = 4.95 \text{ MeV}$ (from Γ)

Empirical fit:
 $z_{trans} = 0.224$ (from MCMC)

FREE PARAMETERS: Only 1 (λ)
 DERIVED: All cosmological predictions

This is the hallmark of a
